CHAPTER 1

INTRODUCTION

1.1 Restaurant Website

I have created a restaurant website by using "HTML", "CSS" and "JavaScript". It is responsive. We can view it perfectly on a desktop or PC, tablet and mobile. I have named it as "Ashoka". It is located in my home city. They don't have their website so I tried to make a real website. I tried to make it beneficial for me in future. If it will work properly then I can sell it. In my website I have made 6 pages: "Home", "Speciality", "Popular", "Gallery", "Review" and "Order". When I run my program there will be a loading image reflected and after some second home page comes. And by hovering on any page we can move to that page. Here I have added a Review page also but for now there is no facility to give rating But the person who has given the rating I have added In future i will try to make user rating also. There is a facility for ordering also you can give your information and we will deliver also and if you want to eat in restaurant then we serve.

CHAPTER 2

TECHNOLOGIES USED

Here I have used HTML, CSS and JavaScript.

2.1 HTML

HTML (Hypertext Markup Language) is the code that is used to structure a web page and its content. For example, content could be structured within a set of paragraphs, a list of bulleted points, or using images and data tables. In simple word I can say HTML is used for structure for page.

2.2 CSS

CSS is **used for defining the styles for web pages**. It describes the look and formatting of a document which is written in a markup language. It provides an additional feature to HTML.

... CSS helps us to control the text color, font style, the spacing between paragraphs, sizing of columns, layout designs, and many more. It is used to decorate web page.

2.2 JAVASCRIPT

JavaScript is brain of any website. It is a scripting language that enables you to create dynamically updating content, control multimedia, animate images, and pretty much everything else. With the help of JavaScript we make our website responsive.

CHAPTER 3

MODULES

3.1 Home Page:

When our page will load then our home page come. Here there is a photo and some text come. There is option of order also.

3.2 Speciality Page

In Our speciality page I have provided what is special in our restaurant there is some cartoon photo that is clickable and there is some text written also for now I have written lorem text In future I will change.

3.3 Most popular food page

This is our most popular foods page and here price tag and review is also provided. An there is a order button also you can order from here.

3.4 How it works

Here I have provided information about how my restaurant website work. Firstly you have to choose what item you want to eat after that you can eat there or our team member will deliver that food item.

3.5 Food Gallery page

In this page what food my restaurant is going to provide you is there. You can choose it as per your requirement.

3.6 Review Page

Here I have provide some person review with their photo regarding food. They have provided some reating.

3.7 Order Now page

If you want to order any item separately or more item then you can go through this page also. You can easily fill information and we will reach to you. And in footer part I have provided social pages also you can connect with us though this but for now it is not connected to any link but I do changes after .

CHAPTER 4

WEBSITE SNAPSHOTS

4.1 This is Loading Page

When we open our website or run our program then this loading page come. It will take few second after that home page come.

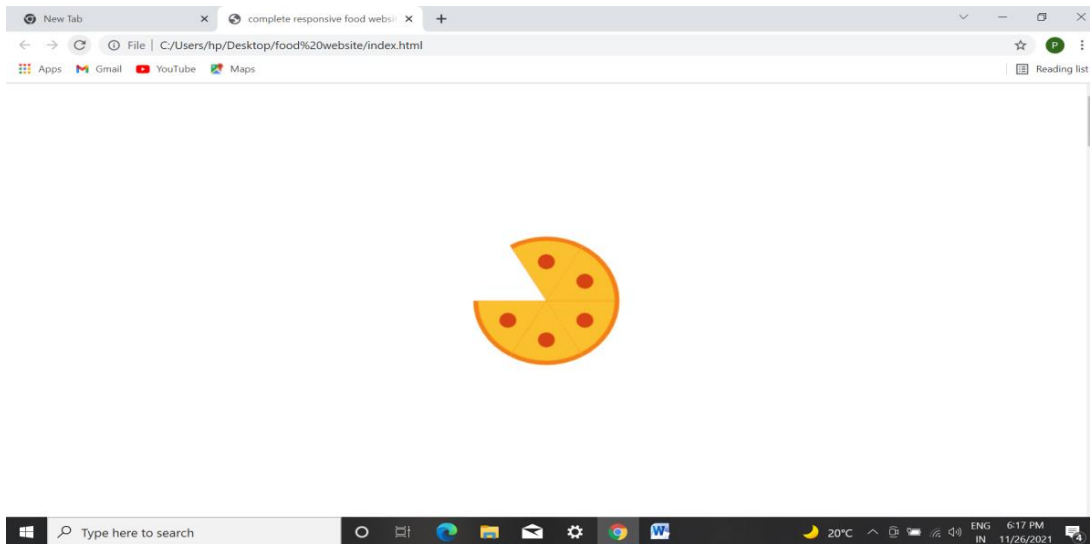

Figure 4.1 loading page
